## Overview

Results-driven Java Software Engineer with experience in Spring Boot, Oracle SQL, and Linux-based environments. Skilled in designing, developing, and deploying enterprise applications across Dev, SIT, and UAT environments, collaborating closely with QA and DevOps teams to ensure seamless delivery, backward compatibility, and system scalability. Passionate about performance optimization, CI/CD practices, and mentoring.

## Experience

02/2024-Present **Senior Software Developer,** eMcReY, Saudi Arabia

- Leading development and enhancement of ECLO corporate and private banking loan approval processes, including limit management and utilization workflows.
- Integrating ECLO with T24 core banking, ECM, and other enterprise services to ensure seamless data flow and process automation.
- Designing and implementing document management features and automated report generation using Jasper/iReport.
- Developing and maintaining eTrade modules for Letters of Guarantee (LG) and Letters of Credit (LC), leveraging approved limits from ECLO.
- Refactoring and optimizing Java Spring Boot microservices for scalability, performance, and backward compatibility.
- Deploying applications across DEV, SIT, and UAT environments, performing configuration and monitoring on Linux servers.
- Improving performance using Oracle SQL tuning and scripting for automation.
- Collaborating with DevOps teams to enhance CI/CD pipelines and deployment automation.
- Supporting testing and QA teams, troubleshooting issues, and delivering production-quality fixes.
- Mentoring junior developers, conducting code reviews, and enforcing best practices.
- Utilizing Jira for task tracking, incident management, and release coordination.

08/2022-02/2024 **Software Developer,** MobiNetS, Lebanon

- Worked on NEP (Network Engineering Platform), a solution used by major network providers to manage network infrastructure.
- Developed core functionalities using Java Spring Boot and Hibernate, including user access management and XML data ingestion for network components, cabinet/shelf/port connections, and topology relationships.
- Migrated and modernized the platform’s UI visualization layer from Polymer to Vaadin, integrating with the Java backend to enable interactive network mapping.
- Designed and optimized RESTful APIs and improved Oracle database performance through efficient queries and entity mapping.
- Deployed solutions across SIT and UAT environments, supporting QA teams with defect resolution and validation.
- Collaborated in Agile teams with infrastructure and QA engineers to deliver scalable and maintainable features

# PROJECTS

Current **Supply Chain Platform,** eMcReY (Java / Spring Boot)

- Developing a supply chain module that captures suppliers, beneficiaries, invoices and receivable invoices submitted by users.
- Built an extractor that maps the submitted data onto Java domain models and persists the records to the database.
- Designed a validation mechanism that checks each record before it enters the approval flow.
- Integrated with the application workflow executor to drive actions and decisions from user choices or automated rules.

Ongoing **Finance Tracker,** Personal Project (Python / Django)

- Building a personal finance web application in Django 5.2 covering budgets, transactions, savings goals, loans and net-worth tracking.
- Designed a Firebase Firestore data model across 10 collections for categories, monthly budgets, transactions, loan schedules and asset/liability snapshots.
- Implemented CSV transaction import with duplicate detection and keyword-based automatic categorization of merchants.
- Built a dashboard comparing budget vs. actual by category, with variance, utilization, top expense category and top overspends.
- Exposed a REST API with Django REST Framework, JWT authentication and CORS. Generated PDF reports with ReportLab and charts with Matplotlib.
- Tech: Python, Django, Django REST Framework, Firebase Firestore, SQLite, ReportLab, Matplotlib.

Recent **Envir Consultancy Website,** Web Project (React / TypeScript)

- Built a content-driven marketing site for an engineering consultancy with React 19, TypeScript, Vite and Tailwind CSS 4.
- Moved all site copy into one JSON file described by a content schema, so content updates need no code changes.
- Added an unlinked admin page to edit, preview and export content drafts.
- Deployed to GitHub Pages with deep-link support and separate test and production repos.

# SKILLS

- Languages & Frameworks: Java (expert), Spring Boot, Python, Django, Django REST Framework, C, C#.
- Frontend & Web: HTML, CSS, JavaScript, TypeScript, React, Tailwind CSS, Vaadin, Angular (basic).
- DevOps & Tools: Git, GitHub, SVN, Jenkins/GitHub Actions, Docker (basic).
- Databases: Oracle, MySQL, PostgreSQL, Firebase Firestore, SQLite.
- Hosting/Servers: IBM WebSphere, Heroku, Render, Linux deployments.
- Practices: Agile/Scrum, CI/CD, release management, testing support.

# EDUCATION

Graduated 09/2022 **Bachelor in Computer Science,** Lebanese University faculty of science 3
